Dräger Receives Health Canada Clearance for Oxylog 3000 plus Emergency Transport Ventilator

Richmond Hill, ON – With the Oxylog 3000 plus, critically ill or injured patients can be ventilated whether they are in emergency situations, during air-ambulance transport, or intra-hospital. New features previously only found on intensive care ventilators such as AutoFlow and integrated capnography are now available during transport.

Dräger continues its leadership in advanced mechanical ventilation with the release of the Oxylog 3000 plus. A full range of ventilation modes such as VC-CMV, VC-AC, VC-SIMV, SPN-CPAP, PC-BIPAP, and now the addition of AutoFlow offers clinicians the continuity of care when transporting outside of the ICU. AutoFlow also allows for spontaneous breathing at the lowest inspiratory pressures as it takes the patient's lung mechanics into account when delivering ventilatory support.

Integrated capnography is now an available option with the Oxylog 3000 plus. For field clinicians, this can be an invaluable tool to recognize proper airway placement, as well as the ability to monitor a patient's change in metabolism especially in confined spaces such as the air ambulance.

For more information, please contact Draeger Medical Canada, Inc. at +1-866-343-2273 or email at Canada.support@draeger.com.

The Oxylog 3000 plus is manufactured by Dräger Medical GmbH.

Dräger. Technology for Life®
